ROBOT VISION - CONTENTS

01 INTRODUCTION TO COMPUTER VISION

- Computer Vision Scope
- Challenges in Computer Vision
- Understanding Images

02 ROBOT VISION PART1

- Examples of 2D Vision in robots
- Introduction to image processing
- Tutorial on image processing

03 ROBOT VISION PART2

- Examples of 3D Vision in robots
- Assignment on closest blob

01 – INTRODUCTION TO COMPUTER VISION

Why should we study Vision

- It is a powerful perceptual modality (the most powerful?), allowing the acquisition of very rich information of the surrounding environment
 - *Object position and velocities*
 - *Relationships among objects*
 - *Object identity*
 - *Interact with the world in a non-invasive way (without physical contact)*
- Complex perceptual system. Above 50% of the human visual cortex is dedicated to processing visual information
- Biological systems are still not very well understood

01 – INTRODUCTION TO COMPUTER VISION

What is an Image?

01 – INTRODUCTION TO COMPUTER VISION

What is an Image?

01 – INTRODUCTION TO COMPUTER VISION

What is an Image?

01 – INTRODUCTION TO COMPUTER VISION

Make computer/robots understand images and videos

Specific Recognition Tasks

- Outdoor, indoor
- City, forest, factory

Image Annotation

- Street
- People
- Buildings
- Mountains
- Tourism
- Cloudy
- Bricks

01 – INTRODUCTION TO COMPUTER VISION

Make computer/robots understand images and videos

Object Detection

- Find Pedestrian

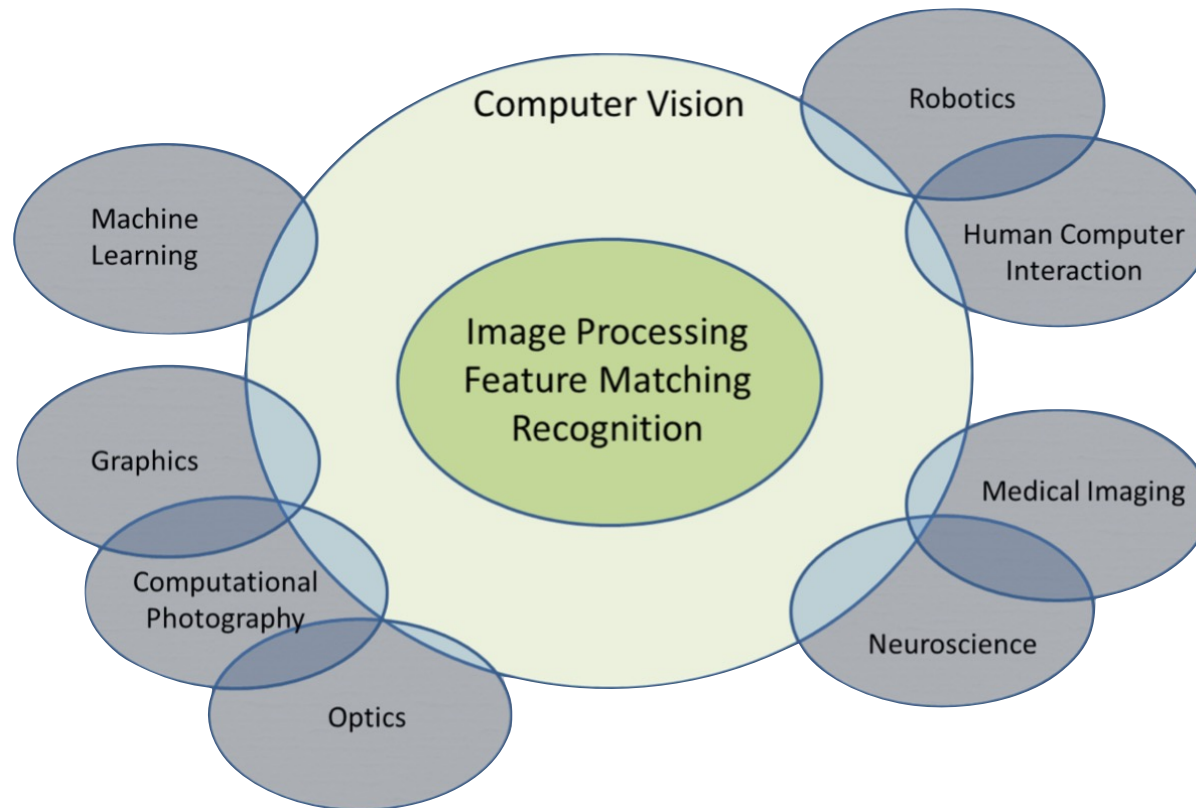

Image Segmentation

01 – INTRODUCTION TO COMPUTER VISION

Computer Vision Scope

01 – INTRODUCTION TO COMPUTER VISION

Computer Vision is **Challenging...**

01 – INTRODUCTION TO COMPUTER VISION

Computer Vision is **Challenging...**

First task:

- Find remote control

01 – INTRODUCTION TO COMPUTER VISION

Computer Vision is **Challenging...**

More realistic tasks:

- Where was this picture taken?
- How many people are there?
- What are they doing?
- What is the object the person on the left is standing on?
- Why is this a funny picture?

01 – INTRODUCTION TO COMPUTER VISION

Computer Vision is **Challenging...**

More realistic tasks:

- **Where was this picture taken?**
- How many people are there?
- What are they doing?
- What is the object the person on the left is standing on?
- Why is this a funny picture?

01 – INTRODUCTION TO COMPUTER VISION

Computer Vision is **Challenging...**

More realistic tasks:

- Where was this picture taken?
- **How many people are there?**
- What are they doing?
- What is the object the person on the left is standing on?
- Why is this a funny picture?

Image Processing

What is meant by image processing?

- It is an umbrella term for many functions that:
 - Analyses images
 - Convert one representation into another
- **Perform operations** on an image to:
 - get an enhanced image,
 - **extract** useful information from it.
- Type of **signal processing**
 - **Input is an image**
 - **Output is an** image or characteristics/features
- Examples
 - Filtering
 - Image Enhancement
 - Edge detection
 - Segmentation
 - Image Analysis

Applications that Process Images

- Object segmentation
- Face recognition
- Iris recognition
- Fingerprint recognition
- Character recognition
- Mathematical morphology
- Detecting Edges

02 – ROBOT VISION PART 1

Image Processing

- Erode original image.
- Dilate eroded image.
- Smooths object boundaries, eliminates noise (isolated pixels) and maintains object size.

02 – ROBOT VISION PART 1

Image Processing

Thresholding Image

Find Contours in image

02 – ROBOT VISION PART 1

OpenCV Library

- **OpenCV** is a *large scale, open* library for computer vision (in C++, w/ Python, Java and Matlab interfaces).
- The **OpenCV** framework contains numerous state-of-the-art algorithms including *filtering, feature extraction and matching, 3D reconstruction, video analysis* and many more.
- **OpenCV** is *cross-platform*, and has been successfully compiled and deployed on Linux, MacOS, Windows, and Android/iOS.
- Website: opencv.org

02 – ROBOT VISION PART 1

Tutorial #1 Image Processing

Simple module that basically:

- Start off with Where's Wally :-)
- loading an illustration
- performing simple image processing
 - Cropping
 - Blurring
 - Modifying contrast

https://github.com/vvv-school/tutorial_find-wally

02 – ROBOT VISION PART 1

Tutorial #2 Image Processing

Simple module that basically:

- Track something round and red :-)
- Work on live image streams
- performing simple image processing
 - Spatial Filters (GaussianBlur)
 - Morphology (dilate, erode)
 - Detect Circles (HoughCircles)

https://github.com/vvv-school/tutorial_yarp-opencv

Assignment Robot Vision

Implement a complex module that:

By now, you should be familiar with:

- Getting images from streams
 - Smoothing Images
 - Eroding and Dilating (Morphology transformation)
 - Basic thresholding
 - Hough Circle Transform
 - Template Matching
 - Finding contours in your image
 - Image Moments
 - Point Polygon Test
- Get **streams of images**
 - **processing** techniques to make the disparity image cleaner for processing. (GaussianBlur, erode, dilate)
 - Retrieve the **maximum value** and its **position**.
 - Apply **thresholding** on that point to remove unwanted background
 - Find the **contour** of the closest object with its **moment** and **mass center**
 - Draw it on the disparity image
 - Get its **bounding box** (ROI-Region of Interest)
 - Create a **cropped image** containing the **RGB image** of the ROI
 - Fill in a **YARP bottle** as a **list**
 - Finally, **stream** the resulting **image** out.
